Graded Lab 03

Data Structures and Algorithms

Task 1:

You are given a string: "4 5 4 * 8 1 0 7 4 5 2* 6 7 * 2";

Read the string from left and apply following algorithm using Queue and stack.

- Read String and push each number into stack
- If '*' is found then, perform 2 pop operation and multiply both numbers. After multiplication en-queue result into Queue.
